

SPRINGTAIL OUTDOOR KIT

U-SPRAY, INC. _____ www.bugspray.com

MAXXTHOR EC

Application: Spray from gutters, down siding to the ground AND 5-10 feet "out" from the foundation. A minimum of 5 gallons is needed for most homes; goal is a "springtail band" around home.

Frequency: Treat 1-2 a week for the first 2 weeks to get ahead of the "exodus." The "exodus" happens when Maxxthor "flushes" springtails out from hiding so they're coming faster than they're dying. After 1-2 weeks, springtail activity will subside.

Mix Ratio & Coverage:

- Recommended - Hose end sprayer: 2.5 oz per 5 gal water; 5 oz per 10 gal water for large homes. Spray AFTER applying granules and evening sprays are suggested when possible.

MAXXTHOR SG GRANULES

Application: Spread 2-3 lbs per side of the home (grass, mulch, flowerbeds).

Frequency: Treat once a month BEFORE spraying.

Description: Maxxthor SG slowly releases over the course of a month taking 30 days during which the to fully release chemicals which trickle down where the springtails are breeding.

ACCESSORY:

HOSE END SPRAYER
